Sequence 7, Application US/08236311
Patent No. 556533
GENERAL INFORMATION
APPLICANT: Capon, Daniel J.
APPLICANT: Gregory, Timothy J.
TITLE OF INVENTION: Adheson Variants
NUMBER OF SEQUENCES: 25
CORRESPONDERE ADDRESS:
ADDRESSE: Genentech, Inc.
STREET: 460 Point San Bruno Blvd
CITY: South San Francisco
STRATE: California
COUNTY: USA
ZIP: 94000
COMPUTER READABLE FORM:
MEDIUM TYPE: 5.25 inch, 360 Kb floppy disk
CONFUTER: IBM PC Compatible
CONFUTER: IBM PC Compatible
CONFUTER: IBM PC Compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARS: Patla (Genentech)
CONFUTER: 10 PATL (Genentech)
CONFUTER: 10 PATL (ATTON DATA:

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 4, A

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence No. 6129914
; Patent No. 6129914
; GENERAL INFORMATION:
APPLICANT: Weiner, George
APPLICANT: Gingrich, Roger
APPLICANT: Link, Brian
TITLE OF INVENTION: B-Specific Antibody Effective to Treat
TITLE OF INVENTION: B-Cell Lymphoma and Cell Line
NUMBER OF SEQUENCES: 14
CORRESPONDENCES: ADDRESS:
ADDRESSEE: Townsend and Townsend and Crew
STREET: One Market Plaza, Steuart Tower, Suite 2000
CITY: San Francisco

Patent No. 6767996

GENERAL INFORMATION:
APPLICANT: Clark, Michael R.
APPLICANT: Clark, Michael R.
APPLICANT: Chark, Michael R.
APPLICANT: Maldmann, Herman
TITLE OF INVENTION: ALTERED ANTIBODIES AND THEIR PREPARATION
MUMBER OF SEQUENCES: 4
CORRESPONDENCE ADDRESS:
ADDRESSEE: Rothwell, Figg, Ernst & Kurz, P. C.
STREET: 555 13TH ST., NW Suite 701 Bast
CITY: Washington
STATE: D. C.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

New fusion molecules comprising polinhibitory receptor and native Igs mediated hypersensitivity reactions autoimmune diseases.  Claim 64; Fig 2; 116pp; English.  The present invention relates to a polypeptide sequence capable of speinhibitory receptor consisting of a inhibitory motif (ITIM), expressed functionally connected to a second specific binding directly or interference of the second functionally connected to a recond specific binding directly or indire (FcepsilonR). Also provided are nucfusion protein. The fusion molecule

The interior istance to a modulative form the process of a main acid residue from the heavy chain constant region selected from residues 250, 314, and 428 (Kabat numbering) is different from that present in the unmodified Fc-fusion protein. Also included are an Fc-fusion protein comprising an Fc region substantially identical to that of a naturally occurring class IgG antibody, a modified Fc-fusion protein court in that of the corresponding unmodified Fc-fusion protein, a modified IgG class antibody fragment (comprising a heavy chain constant region or Fc-region where at least one amino acid residue selected from the group consisting of residues 250, 314, and 428 is different from that present in the unmodified IgG class antibody), an isolated polynucleotide molecule encoding a polypeptide comprising a sequence at least 90% identical to a sequence selected from ADZ69656, an isolated polypeptide comprising an amino acid sequence at least 90% identical to sequence selected from ADZ69656, an method for altering FcRn binding at least one amino acid seduce as cited above, and substituting the selected residue(s) with an amino acid different from chair present in the Fcfusion protein) and a method of producing a modified Fc-fusion protein with an amino acid sequence FCFusion protein with an amino acid sequence of Erchain with an altered binding affinity for FCRN/altered servum half-life as compared with the unmodified Fc-fusion protein with the unmodified Fc-fusion protein with the unmodified Fc-fusion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           protein (comprising preparing an expression vector comprising a suitable promoter operably linked to DNA encoding at least a constant region of an 1967 heavy chain, transforming host cells with the vector and culturing the transformed host cells to produce the modified 196 Fc fusion protein). The modified antibody has a higher affinity for FcRn at DH 6.0 than at DH 8.0. The fusion proteins are useful for studying protein gentcion in vitro and in vivo and as potential therapeutic and diagnostic agents. The present sequence represents a human 1961 heavy chain constant region with an amino acid substitution at residue 250, 314 or 428 (Kabat numbering, the actual residue that is mutated is covered in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               180

soluting a nucleotide which encodes the zcytor 10 cytokine receptor enables the production of recombinant cells expressing the receptor.

Those cells can then be used to detect the presence of a modulator of zcytor10 protein by culturing the cells in the presence of a test ligand and comparing levels of activity of mouse zcytor10 in the presence and absence of the test sample. Similarly, detection of zcytor10 receptor ilgand within a test sample can be achieved. The method comprising contacting a test sample can be achieved. The method comprising contacting a test sample containing an amino acid sequence from Cysls or divys to Pro230 of the zcytor 10 cytokine receptor and detecting the binding of the polypeptide to a ligand in the sample. Specified peptide fragments of the zcytor 10 cytokine receptor and the methods described are used to identify ligands that stimulate the proliferation and/or development of haematopoietic, lymphoid and mycloid cells. Peptide fragments of the cytokine receptor are useful for treating lymphoid, immune, inflammatory, splenic, blood or bone disorders and for generating continuants of the cytokine receptor. A vector expressing a secreted human zcytor 10 heterodimer is constructed. In this construct the cytokine receptor subunit gamma and the extracellular portion of the the heteromeric cytokine receptor subunit (an interleukin receptor subunit) is fused to human xappa light chain (see GBNESEQ record AAAS4474). The two sequences are fused together using two primers (AAAS4475, AAAS4476)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New cytokine receptor mouse zcytor 10, useful for detecting ligands that stimulate proliferation or development of hematopoietic, lymphoid and myeloid cells.
                                                                                                                                                                                         zcytor 10 cytokine receptor; cytokine; receptor; antibody; ligand; binding; detection; modulation; recombinant cell; haematopoietic cell; lymphoid cell; myeloid cell; lymph; lwmune system; blood; bone; inflammator; response; inflammation; spleen; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

```
The invention relates to an immunoadhesin comprising: (a) a chimeric intercellular adhesion molecule (ICAM)-1 comprising a rhinovirus receptor protein linked to at least a portion of an immunoglobulin heavy chain; and (b) optionally a J chain and secretory component associated with the chimeric ICAM-1 molecule. The immunoadhesin is useful for educing infection and virucide activity. The immunoadhesin is useful for equicing infection by human rhinovirus (HRV) and hence the initiation or spread of the common cold by HRV. The immunoadhesin binds to HRV and release of the infectivity, competing with cell surface ICAM-1 for binding release interfering with virus entry or uncoating and directing premature release of viral RNA and formation of empty capsids. Expression of the immunoadhesin in plants would be tetrameric, rather than dimeric. Immunoadhesin having multiple binding sites have a higher effectives of the immunoadhesin. Association of secretory component and immunoglobulin J immunoadhesin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Immunoadhesin for treating human rhinovirus infection comprises chimeric intercellular adhesion molecule-1, and optionally a J chain and secretory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Disclosure, Fig 7; 138pp, English.

chain increases the stability of the immunoadhesin in the mucosal environment. Production is significantly less expensive in plants than animal cell culture and production in plants is safer for human use, since plants are not known to harbor any animal viruses. The present sequence is that of a human immunoglobulin protein sequence, useful to

The present invention describes an isolated human zcytor19 protein (I),
and truncated zcytor19 proteins. (I) has immunosuppressive, cytostatic,
and truncated zcytor19 proteins. (I) has immunosuppressive, cytostatic,
antidiabetic, antiatrhritic, neuroprotective, antiinflammatory,
antidiabetic, nephrotropic, dermatological, anti-HIV and haemostatic
activities, and can be used in vaccines. (I) or an antibody binding (I)
can be used for suppressing the immune system for reducing rejection of
tissue or organ transplants and grafts and for treating T-cell specific
cleakaemias or lymphomas and autoimmune diseases including rheumatoid
archritis, multiple sclerosis, diabetes mellitus, inflammatory bowel
disease and Crohn's disease. The antibodies can also be used for treating
immunologic renal diseases, glomerulonephritis, mesangioproliferative
climunologic renal diseases, glomerulonephritis, scleroderma, HIV-related
disease, chronic lymphocytic leukaemia, secondary glomerulonephritis or
vasculitis associated with lupus, polyarteritis, scleroderma, HIV-related
diseases, amyloidosis and haemolytic uraemic syndrome. (I) and the
antibodies can also be used for renal or urological neoplasms and
cliebeases, amyloidosis and haemolytic uraemic syndrome. (I) and the
antibodies can also be used for renal or urological neoplasms and
cliebeases. Human zcytor19 is located to chromosome 1, more specifically to
chromosome 1p36.11. The present sequence represents a human Igg gamma 1

                                                                                                                                                                                                            300
                                                                                                                                                                                                                              The present invention describes a cytokine receptor designated zcytor17. Scytor17 has immunomodulatory, antiniflammatory, antiviral, cytostatic, antirheumatic, antiarthritic and muscular activities. The zcytor17 proteins are useful for treating and diagnosing lymphoid, immune, inflammatory, spleenic, blood or bone disorders. Agonists or anti-zcytor17 antibodies are useful in stimulating cell-mediated immunity and for stimulating lymphocyte proliferation, such as in the treatment of infections involving immunosuppression, including certain viral

They are also useful for inducting cytotoxicity and for treating leukopenias. Antagonist of zcytor17 polypeptides are useful freating autoimmune diseases (e.g. rheumatoid arthritis and multiple sclerosis), inflammatory diseases (e.g. Crohn's disease), cancer, pancreatitis, and inflammatory bowel disease. Zcytor17 was mapped to chromosome 5, specifically to the 5q11 chromosomal region. ABA93767 tc ABA93443 and ABB05730 to ABAB05745 represent sequences used in the exemplification of the present invention

The invention relates to a novel fusion protein comprising an IgE Prepsilon fragment and an IgG Fcgamma fragment, which binds to an Fcepsilon fragment and an IgG Fcgamma fragment, which binds to an Ecpsilon and an Fcgammas. The fusion protein of the invention may have a use in protein therapy. The fusion protein is useful in treating or preventing IgE-mediated allergies and asthma, such as allergic asthma, allergic rhinitis, hay fever, food allergy, atopic dermatitis and drug allergy. The allergic response is particularly caused by peanut allergen. The present sequence represents the human IgG1 Fcgamma fragment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     61 GLYSLSSVVTVPSSSLGTQTYICNVNHKPSNTKVDKKVEPKSCDKTHTCPPCPAPELLGG 120

Reducing the immunogenicity of a fusion protein by changing an amino acid within the junction region spanning a fusion junction of a fusion protein to reduce the ability of the candidate T-cell epitope to interact with a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to a method of reducing the immunogenicity of a fusion protein. The method involves identifying a candidate T-cell epitope within a junction region spanning a fusion junction of a fusion protein and changing an amino acid within the junction region to reduce the ability of the candidate T-cell epitope to interact with a T-cell proteins for use in therapy. The present sequence is human ammunoglobulin (I [IgG1] heavy chain Fc region. This sequence is used to illustrate the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                241 LIKNQVSLTCLVKGFYPSDIAVEWESNGQPENNYKTTPPVLDSDGSFFLYSKLTVDKSRW 300

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     300
                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a method for reducing the immunogenicity of a fusion protein which involves identifying a candidate T-cell epitope within a junction spanning a fusion junction of a fusion protein, and changing an amino acid within the junction region to reduce the ability of the candidate T-cell epitope to interact with a T-cell receptor. The method is useful for reducing the immunogenicity of a fusion protein. It is useful for analysing, changing or modifying one or more amino acids in the junction region of a fusion protein to identify a T-cell epitope and immunogenic fusion proteins are useful in providing therapeutic treatment. The present sequence is human immunoglobulin GI [IGG1] heavy chain PC region used to illustrate the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9

Treating or preventing a B cell mediated condition e.g., chronic hepatitis or chronic cirrhosis, in a mammal by administering a pharmaceutical composition comprising a DR6 agonist or DR6 antagonist to the mammal.

Disclosure; Page 96-97; 97pp; English.

The present invention describes a method (MI) for treating or preventing as 0 call mediated condition in a mammal by administering a pharmaceutical composition comprising a DRE aganist or DRE antagonist to the mammal.

Composition comprising B DRE aganist or DRE antagonist to the mammal. By administering a pharmaceutical composition comprising at least one DRE aganist or DRE aganist or DRE aganist or DRE aganist in the manufacture of a medicament for treating or preventing at least one symptom associated with conditions (CI) such as aberrant apportosis, graft-versus-host disease (GVHD), atopy. Theumacolist, multiple ofelerosis, Mahimoto's thyroiditis, Graves disease, transplant rejection, systemic lupus erythemacosus, Behcef's disease, transplant scardiopathy, autoimmune heaptigus, dispathic interstitial, phenomonia, hypersensificity pneumonitis, autoimmune desactis, dispathic interstitis, chronic cirrhosis, flibrosing lung disease, fullminant viral hepatitis, chronic hepatitis, chronic cirrhosis, flibrosing lung disease, fullminant viral hepatitis, chronic cirrhosis, myelodysplasia, multiple organ dysfunction syndrome (MNS), adult to respirate anticipate associated with conditions (C2) such as aberrant apoptors, immunodeficiators of medicament for treating or preventing at least one symptom associated with conditions (C2) such as aberrant apoptors, immunodeficiators of medicament for treating can be part in the manufacture of a medicament for treating can be part in the manufacture of a medicament for treating contition or symptom cell infection, complications (C2) such as a least one condition or

ö The invention provides human antibodies that bind to stem cell factor (SCF) protein. SCF is also known as mast cell growth factor, steel factor or c-kit ligand. Antibodies of the invention are useful for preparing compositions for treating asthma. They are also used in gene therapy. The present sequence is human SCF antibody heavy chain constant region 180 241 LTKNQVSLTCLVKGFYPSDIAVEWESNGQPENNYKTTPPVLDSDGSFFLXSKLTVDKSRW 300 PSVFLFPPKPKDTLMISRTPEVTCVVVDVSHEDPEVKFNWYVDGVEVHNVKTKPREEQYN 180 9 Human, antibody, stem cell factor; mast cell growth factor; asthma; SCF; steel factor; c-kit ligand; gene therapy; heavy chain. antibody, is useful for inhibiting undesired angiogenesis, treating cancers, inhibiting undesired angiogenesis, modulating or inhibiting Ang-2 activity, modulating vascular permeability or plasma leakage, or treating a disease (e.g. ocular neovascular disease, obesity, inflammatory diseorders, atherosclerosis, endometriosis, incoplastic disease, bone-related disease, or psoriasis) in a mammal. The present sequence represents a human IgG1 constant region of an anti-Ang-2
                                                                                                                                                                                                                                                                                                          9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Cytokine; interleukin-2; IL-2; cancer; viral infection; immune disorder; gene therapy; immunoglobulin; Ig; human.

                                         The invention relates to cytokine fusion proteins with increased therapeutic index and methods for increasing the therapeutic index of such fusion protein comprises a non-interleukin-2 (IL-2) moiety fused to a mutant IL-2 moiety. It is useful for preparing a composition for treating cancer, viral infections or immune disorders. The fusion protein is also used in gene therapy. The present sequence is human immunoglobulin gamma (IgG) constant region. This sequence is used to illustrate the method of the invention

The present invention describes an isolated human antibody (I) that specifically binds osteoprotegerin ligand (OPGL). Also described: (1) a pharmaceutical composition comprising a pharmaceutical carrier and a therapeutic amount of (I); (2) methods of treating an osteopenic disorder in a patient, comprising administering to a patient the pharmaceutical composition of (I) or a pharmaceutical amount of (I); and (3) a method composition of (I) or a pharmaceutical amount of (I); and (3) a method composition of (I) and phological sample, comprising contacting the sample, to OPGL, and measuring the level of bound antibody in the sample. (I) has osteopathic, antiarthritic and cytosteatic activities, and can be used in treating bone disorders, such as osteoporosis, bone loss from arthritis, pager's disease or osteopenia. The antibody (I) may also be used for detecting OPGL in biological samples and in identifying cells or tissues that produce the protein. The present sequence represent a sequence which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

Total number of hits satisfying chosen parameters:

Minimum DB seq length: 0 Maximum DB seq length: 200000000

Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

pirl:\* pir2:\* pir3:\* pir4:\* PIR 80:\* Database

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A;Contents: annotation; Zie, revisions to residues 25, 59, 60, and 264-268
A;Note: the revised sequence differs from that shown in having 60-Ala and in the amidat:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A Map position: 14932.33-14932.33
C; Complex: An immunoglobulin hererotetramer gubunit consists of two identical light (kai hain disulfide bonds. In some cases, such as IgA and IgM, the subunits associate into l. C; Superfamily: immunoglobulin C region; immunoglobulin homology
C; Keywords: duplication; glycoprotein; heterotetramer; immunoglobulin
C; Superfamily: immunoglobulin homology < LML>
E; 20.0-8; Domain: immunoglobulin homology < LML>
E; 20.5; Domain: immunoglobulin homology < LML>
E; 213-202/Domain: immunoglobulin homology < LML>
E; 214/Disulfide bonds: interchain (to light chain) #status experimental
E; 27-83; 140-200, 246-304/Disulfide bonds: #status experimental
E; 210.103; 106, 109; Disulfide bonds: interchain (to heavy chain) #status experimental
E; 27-83; 105-103; 106, 109; Disulfide bonds: interchain (to heavy chain) #status experimental
E; 105, 103, 106, 109; Disulfide bonds: interchain (to heavy chain) #status experimental
E; 105, 108, 108, 108, 109; Disulfide bonds: interchain (to heavy chain) #status experimental

C; Complex: An immunoglobulin heterotetramer subunit consists of two identical light (ka hain disulfide bonds. In some cases, such as 19A and 19M, the subunits associate into 1; S; Seywords: duplication; glycoprotein; heterotetramer; immunoglobulin

DNA 1, 11-18, 1981

A/TILle: Nucleotide sequence of a human immunoglobulin C-gamma4 gene
A/Reference number: A90933; MUID:83157104; PMID:6299662
A/Accession: A90933
A/Molecule type: DNA
A/Residues: 1-327 < ELL>
A/COSS-references: UNIPROT:P01861; UNIPARC:UPI0000047190
A/Note: the sequence was determined from the germline gene
